ABOUT ME

Motivated 3rd-year ICT Engineering student with a strong Purple Team mindset, specializing in Infrastructure as Code (IaC), Red Team Automation, and DevSecOps. I possess hands-on experience in engineering hardened C2 infrastructures, automating deployments with Terraform/Ansible and performing AD exploitation.

I am actively seeking junior roles in Cybersecurity Consultant, Red Teaming, or Network Engineering where I can apply my skills in secure infrastructure design, automation, and threat simulation.

TECHNICAL PROJECTS

Automated Red Team Infrastructure

Engineered a fully automated Infrastructure as Code (IaC) pipeline to provision hardened Sliver C2 server. The system utilizes Ansible for configuration management, implementing polymorphic compilation to evade static analysis and strict Systemd sandboxing for process isolation. Currently upgrading the provisioning architecture to Terraform (v3) and Ligolo-ng.

Active Directory Exploitation Lab (Ongoing Home Lab)

- Deployed a virtualized corporate network to simulate the full kill-chain.
- Executed identity-based attacks including Kerberoasting, Golden Tickets, and AS-REP Roasting using NetExec, Impacket and BloodHound.
- Produced clear, step-by-step documentation of the attack chain phases to serve as internal learning material for students/teams.

Thesis: Command & Control Frameworks (TAMK) Grade 5

- Researched modern adversary tradecraft using the Mythic C2 framework.
- Demonstrated fileless malware execution on Linux using memfd_create to bypass disk-based detection mechanisms.

EDUCATION

Bachelor of Engineering, ICT

Tampere University
of Applied Sciences 2023-2027

Core themes include Cybersecurity,
Networking and Telecommunications

Further vocational qualification, Safety / Security

Turun
Aikuiskoulutuskeskus 2018-2019

LANGUAGES

- Finnish (Native) • English (Fluent) • Swedish (Basics)

TECHNICAL SKILLS

Offensive Security

- Active Directory Exploitation
- Metasploit Framework & Burp Suite
- C2 Operations (Mythic)
- Network Reconnaissance (Nmap, Wireshark)
- Privilege Escalation (Windows/Linux)
- C2 Frameworks: Sliver(Customization & Polymorph)
- OpSec Tradecraft: Traffic Masquerading, Redirectors, Anti-Forensics

Defensive Security & Networking

- SIEM & Monitoring (SecurityOnion, Wazuh, Suricata)
- MITRE ATT&CK Framework
- Cisco Routing & Switching (CCNA ENSA / SRWE)
- TCP/IP, DNS, DHCP, VLANs, VPN

Infrastructure & Scripting

- Windows Server Administration
- Linux Management (Debian/Ubuntu)
- Virtualization (VMware, VirtualBox, Docker)
- Python, Bash, PowerShell
- Azure Fundamentals
- SQL

CERTIFICATIONS

- CCNA: Switching, Routing, and Wireless Essentials
- CCNA: Enterprise Networking, Security, and Automation
- Cisco Ethical Hacker
- Cisco CyberOps Associate
- Microsoft Skills for Jobs: Azure Fundamentals
- Microsoft Skills for Jobs: Cybersecurity Architect

Automated Phishing Infrastructure (Evilginx2)

- Engineered an Infrastructure as Code (IaC) pipeline using Ansible to deploy resilient phishing servers quickly.
- Orchestrated service persistence using Systemd and Tmux, allowing operators to detach/attach to sessions without interrupting active attacks.

PROFESSIONAL EXPERIENCE

Offensive Security Analyst - Red Team | Accenture Nordics - Cyber Attack Simulation(2026 - Present)

Intern | Tampere University of Applied Sciences(2025)

- Technical Implementation: Configured Raspberry Pi and CaribouLite hardware to conduct practical Software-Defined Radio (SDR) signal analysis.
- Curriculum Development: Authored comprehensive technical documentation
- Achievement: The produced guides were integrated directly into the university's curriculum to enhance hands-on learning for future ICT students.

Shift Supervisor & Field Manager | Securitas Oy(2021 – 2023)

- Led field teams in high-pressure situations and acted as the primary point of contact for critical security incidents. Responsible for incident reporting and crisis de-escalation.
